

VANUATU TREDS REPORT FOR 2013-2014

Report prepared by Catherine Siota, Turtle Database Officer

1. INTRODUCTION

The purpose of this report is to provide Wan Smolbag Theatre's (WSB) Vanua-Tai Turtle Monitors Network and partners with a summary of tagging and nesting information that has been submitted to SPREP for incorporation into the regional Turtle Research and Monitoring Database System (TREDS).

This report also aims to provide information that can be used to assist turtle conservation work carried out in Vanuatu.

The data held in TREDS is from fieldwork carried out in Vanuatu by the Wan Smolbag's Vanua Tai Turtle Monitors Network as well as the Environment Unit, Fisheries and documents listed in the bibliography at the end of TREDS report for 2009 (Trevor, 2009) and earlier reports from Siota (2010-2012).

This report provides an update of all data in TREDS and accommodating the recent data received for 2013- 2014 period, during this reporting period (2012 July - 2014).

2. TAG INVENTORY

The tag inventory for Vanuatu records all tags received from SPREP and details of damage and distribution of tags. The tag inventory records all flipper tags used for turtle monitoring in Vanuatu.

2.1. Tags distributed by SPREP to Vanuatu

Tags distributed to WSB, Environment Unit, Fisheries and Tranquility Resort by SPREP now total up to 13,578. Out of this total, only 4,289 (31.6 %) are recorded in TREDS (Annex 1). Trevor (2009) reported a total of 9,663 tags distributed by SPREP to Vanuatu and only 2,392 (24.8%) are recorded in TREDS as being used. While Siota (2010) reported 10,295 tags distributed and 2,994 (29.1%) as applied to turtles and Siota (2011-2012) reported 12,410 as distributed and only 3,652 (29.4%) are recorded in TREDS.

2.2 Tags distributed by other agencies to Vanuatu

There are no records of tags distributed by other agencies for Vanuatu in TREDS.

3. SPECIES NUMBERS BY SITE FOR VANUATU

Hawksbill turtle (n=1204) is the species with the highest record in TREDS for Vanuatu. This is followed by green (n=693), unidentified marine turtle species (n=144), leatherback (n = 17), loggerhead (n=7) and olive ridley turtles (n=5) (Annex 2). The new update for this reporting period is the inclusive of data from Tranquility Resort, Bamboo bay, Emua Village, Letokas, Malekula Island, Mapuna Beach, Peskarus, Port Narvin, Taloa village, Unakap, Tumaris, Votlo, Wiawi, Anelcouhat and Lamap village, for 2012-2014 period. The details of turtles encountered are as follows:

- **1973:** One green turtle which was tagged and released from Scilly Atoll in French Polynesia was reported as a tag recovery in 1973 in Maskelyne Island;
- **1992:** Five juvenile turtles of the species hawksbill (n=2) and green turtles (n=3) were captured, tagged and released in Lutes and Pelongk villages in Maskelyne Island;
- **1993:** Two loggerhead turtles were tagged in Wiawi village in Malekula Island, but tag numbers were not recorded in TREDS. Also in 1993 one nesting green turtle was reported from Motalava Island.
- **1994:** This was a random encounter from Ambrym Island, a beach washed turtle, originally tagged in Rose atoll, American Samoa.
- **1995:** Another Random encounter from Aneitym Island, a turtle originally tagged from Scilly atoll, French Polynesia

- **1996:** A total of 58 hawksbill and 10 green turtles were observed in 1996;
 - Out of the total, 59 hawksbill and 10 green turtles were reported from Efate Island, in the following sites:
 - ❖ Fifty-four hawksbill turtles and two green turtles were tagged and released from Tukutuku Ranch, Out of the 54 hawksbill turtles, 53 of them were head starting turtles that were kept in captivity, while one was an observed nester;
 - ❖ For foraging turtles, five green turtles were captured by netting and were tagged and released from Sun Island (n=1), Takara village (n=2) and Tanoliu village (n=2). While four hawksbill turtles were tagged and released from Tanoliu village (n=1), Tasipuariki (n=1), Efate island (n=1) and Toa Lima (n=1);
 - Three green turtles were also reported from Utanlang village, Nguna Island. One was observed to be foraging, while the other two beached and nested;

- **1997:** A total of four green, two hawksbill and one olive ridley turtles were reported to be captured, tagged and released in 1997, following bullet points are the detailed breakdown:
 - Out of the total, a green turtle and an olive ridley turtle were from Emua village, while one hawksbill turtle was from Mangaliliu village and a green turtle from Siviri village;
 - In addition, two green turtles were captured by rodeo on Nguna Island in the villages of Tikilaso (n=1) and Unakap (n=1);
 - Furthermore, one hawksbill turtle was initially tagged from Tukutuku Ranch in 1996 and was recaptured in Bounkil, Erromango Island in 1997;

- **1998:** A total of 25 hawksbill and 12 green turtles were reported to be captured, tagged and released in 1998 for foraging turtles. Also an addition of two nesting green turtles were reported from Takara village in Efate and one green turtle reported from Utanlang village in Nguna Island. Following are the detailed breakdown:
 - Seven hawksbill and four green turtles were from Nguna Island. Out of the total, five hawksbill turtles were reported from Nagustare point (n=1), Tarena (n=1) and Woralapa (n=3), while two hawksbill and two green turtles were from Malapau passage (n=2) and Utalang. In addition one green turtle was from Tikilaso (n=1);
 - While 12 hawksbill and four green turtles were from Emua (n=3), Hat (Eretoka) Island (n=1), Mangaliliu (n=2), Panuagisu (n=1), Tanoliu (n=1), Toa Lima (n=1), Tasipuariki (n=5) and Vatupau (n=1) in Efate Island;
 - With two hawksbill turtles from Lelepa landing (n=1) and Leosa passage (=1) in Lelepa Island;
 - In addition, two green turtles were from Epi Island in the villages of Bongovio (n=1) and Mafilau (n=1);
 - Moreover, three green turtles were from Avunatari village (n=1) in Malo Island and Kakula Island (n=2);
 - One hawksbill turtle was reported from Marou village in Akamb Island;
 - Furthermore, one hawksbill turtle was reported from Champagne beach in Espirito Santo and two green turtles from Isavai village in Aniwa Island (n=2).

- **1999 Foraging:** A total of 13 green and 17 hawksbill turtles were reported to be captured, tagged and released in 1999. Following bullet points are the detailed breakdown:
 - From Efate Island, out of the total, four green turtles were from Emua (n=1), Samoa Point (n=1), Takara (n=1) and Toa Lima passage (n=1). For hawksbill turtles, four were reported from Emua (n=1), Toa Lima Passage (n=1) and Mangaliliu (n=2);
 - In addition, two green turtles were from the villages of Mafilau (n=1) and Nelson Bay (n=1) and two hawksbill turtles from the villages of Bongovio (n=1) and Brisbane (n= 1) in Epi Island;
 - Moreover, one green turtle from Emotu passage and two hawksbill turtles were from Tasiriki village (n=1) and White Stone (n=1) in Moso Island;

- From Malo Island, one green turtle was tagged and released from Avunatari village and a hawksbill turtle from Malo passage;
- In addition, five green turtles were captured, tagged and released from Isavai village, Aniwa Island (n=1), Rovo Bay, Emae Island (n=1), Lasoa, Emau Island (n=1), Port Olry, Espirito Santo (n=1), Pelongk village, Maskelyne Island (n=1). And eight hawksbill turtles reported from Marou, Akamb Island (n=1), Isavai village, Aniwa Island (n=1) Lelepa Landing, Lelepa Island (n=1), an unknown site, Vanuatu (n=1), Tanoliu village (n= 3) and Napangoro (n=1).
- **2000 Foraging:** A total of 50 hawksbill and 26 green turtles and were captured, tagged and released for foraging turtles. And one random report of tag recovery from Aneitym, but turtle is unidentified.
 - Fifteen hawksbill and four green turtles were from the Island of Efate in the villages of Emua (n=8), Epau (n=2), Mangaliliu (n=1), Siviri (n=3), Tanoliu (n=2), Lanukarae (n=1), Laukenasua (n=1) and Panuagisu (n=1);
 - Five green and two hawksbill turtles from Epi Island were tagged and released from the following sites: Brisbane village (n=1), Mafilau village (n=1), Sara village (n=2), Alack reef (n=1) and Volan village;
 - Five green and one hawksbill turtles were from Aniwa Island in the villages of Isavai (n=5) and Aniwa lagoon (n=1);
 - One green and 11 hawksbill turtles were head starting turtles from Tranquility Island Resort in Moso, that were in captivity and were tagged and released;
 - From Malekula Island, two green turtles were tagged and released from Manmol (n=1) and Sohbef (n=1), in addition, three hawksbill turtles were from Tomma;
 - Furthermore, in Maskelyne Island, three green turtles were tagged and released from Lutes village, as well as two hawksbill turtles from Pelongk (n=1) and Peskarus (n=1);
 - Five hawksbill turtles were reported from Malo Island in the villages of Avunatari (n=4) and Nanuku (n=1), they were also tagged and released;
 - While two green turtles were from Nelson Bay and one hawksbill from Valesdir village in Emae Island;
 - Also reported from Emau Island in Lausake passage was one hawksbill turtle, as well as one green turtle and a hawksbill turtle were tagged and released in Wiana village;
 - In addition, one hawkbill and one green turtle were from Hog harbour and one hawksbill turtle from Port Olry (n=1) in Espirito Santo.
 - Three hawksbill turtles from Freemantle (n=1) and Piliuru village (n=2) in Pele island;
 - Two hawksbill turtles were reported from Tegua island in the villages of Lateu (n=1) and Tavloel (n=1). Turtle from Tavloel was a nester.
 - Moreover, four green turtles were from Marou village, Akamb Island (n=2), Graig Cove, Ambrym Island (n=1) and Tikilaso village, Nguna Island (n=1). While two hawksbill turtles were from Motalava village, Motalava Island (n=1) and Lolbiribirisulu village in Pentecost Island.
 - And an unidentified turtle recovered from Aneitym.
- **2000 Nesting:** For nesting turtles, two hawksbill and three green turtles were reported. Following bullet point is the detailed breakdown:
 - Three green turtles were reported from Asaola village, Aniwa Island (n=1), Epau village reef, Efate Island (n=1) and Rovoliu village, Epi Island (n=1). And the two hawksbill turtles were from Rovoliu village, Epi Island and Tavloel village, Tegua Island (n=1).
- **2001 Foraging:** A total of 26 hawksbill and 18 green turtles and 10 unidentified marine turtle species were captured, tagged and released in 2001. As well as two nesting green turtles which were reported from Mafilau, Epi Island and Litatra village, Tegua Island . The following are the details of the foraging turtles encountered:
 - Out of the total, eight green turtles were from Efate Island in the villages of Emua (n=2), Epau (n=1), Siviri (n=1), Takara (n=3) and Tanoliu (n=1). And as well as nine hawksbill

- turtles were from the same villages in Efate Island, in Emua (n=3), Epau (n=1), Siviri (n=2), Takara (n=1) and Tanoliu (n=2);
- From Emau Island, five green turtles were encountered from the village of Isavai (n=2), Ngurua (n=2) and Wiana village (n=1) and four hawksbill turtles from Wiana village;
 - From Epi Island, Two green turtles were from Bongovio village and one hawksbill turtle from Volan village (n=1);
 - Moreover, four hawksbill turtles were from Pentecost Island in Loltong (n=3) and Namwarangiut village (n=1);
 - Furthermore, one green turtle was from Marou village, Akamb Island and six hawksbill turtles were tagged and released from Natapau village, Lelepa Island (n=1), Herelol village, Loh Island (n=1), Mantale-Lamb, Malekula Island (n=1) and Marou village, Akamb Island (n=3). Moreover, Nine unidentified marine turtle species were from Tranquility Island Resort, Moso Island (n=8) and Pango village, Efate (n=1);
 - Two foraging hawksbill turtles were also tagged and released from Halava, Ambae Island (n=1) and Lembu Bay, Avok Island (n=1);
 - For nesting turtles, two green turtles were reported for 2001 period. Following bullet points are the detailed breakdown:
 - One green turtle beached for nesting in Epi Island at Mafilau village;
 - While, another green turtle beached for nesting at Litatra village in Tegua Island.
- **2002 Foraging:** A total of 23 green and 24 hawksbill turtles and 23 unidentified marine turtle species were reported to be captured, tagged and released in 2002, following bullet points are the detailed breakdown:
 - From Efate Island, 11 hawksbill turtles were encountered from the village of Epau (n=1), Mangaliliu (n=2), Mele (n=1), Namoso (n=2), Siviri (n=3) and Tanoliu (2); while six green turtles were from the villages of Takara (n=1) and Siviri (n=1), Epau, (n=2), and Emua (n=2).
 - Two hawksbill turtles were from Epi Island in the villages of Nikaura (n=1) and Nuvi (n=1), and from Malekula Island, two green turtles were from Labo village and two hawksbill turtles from Lembenwen village;
 - From the Island of Maskelyne, three green turtles were from Lutes (n=1), Peskarus (1) and Sakao Island (n=1) and one hawksbill was also from Sakao Island. Furthermore, two hawksbill turtles were from Lateu village (n=1) and Litatra village (n=1) in Tegua Island;
 - Twenty-three hawksbill turtles were head starting turtles that were released from captivity from Tranquility Island Resort, Moso Island;
 - Furthermore, 12 green turtles were from Akamb village, Akamb Island (n=4), Wiana village, Emau Island (n=1), Nakere village, Espiritu Santo (n=1), Natapau village, Lelepa (n=1), Piliuru village, Pele Island (n=1) Ringdove, Epi Island (n=1), Lutes village, Maskeylne (n=1), and Latano village, Pentecost Island (n=2). Also six hawksbill turtles were from Akamb village, Akamb Island (n=1), Woru, Ambrym (n=1), Wiana village, Emau Island (n=1), Natapau village, Lelepa (n=1), Piliuru village, Pele Island (n=1) and Latano village, Pentecost Island (n=1).
 - **2002 Nesting:** For nesting turtles, 11 green and four leatherback turtles were reported for 2002 period. Following bullet points are the detailed breakdown:
 - For the nesting turtles, 11 were nesting green turtles reported from Emua village, Efate Island (n=1), Epau village reef, Efate Island (n=1), Votlo village, Epi Island (n=6), and Lawa village, Malekula Island (n=3). Moreover three leatherback turtles were also from Votlo village in Epi Island.
 - **2003 Foraging:** A total of 44 hawksbill and 24 green turtles, and 25 unidentified marine turtle species were reported in 2003. Following are the detailed breakdown:

- Out of the total, 10 hawksbill turtles were encountered in Emua (n=6), Epau (n=1), Saama (n=2) and Tanoliu (n=1) and five green turtles from Mangaliliu (n=1), Siviri (n=2) and Takara (n=2) in Efate Island;
 - In addition, three green turtles were from Semsahao (n=1), Willes (n=1), and Binniho (n=1). And three hawksbill turtles reported from Avok Island (n=2) and Lawia (n=1).
 - From Malekula Island, eight hawksbill turtles were reported from the villages of Lawa (n=3) and Lembenwen (n=5) and an additional of one green turtle from Melip village (n=1). Moreover in Nguna Island, seven hawksbill turtles were reported from Lanusaroi (n=2), Matakove (n=1), Tikilaso (n=3), and Woralapa (n=1), while two green turtles were from the villages of Nekapa (n=1) and Lanusaroi beach (n=1) also in Nguna Island;
 - Furthermore, from Emau Island, three green turtles were reported from Lausake (n=2), and Ngurua (n=1) and five hawksbill turtles from the villages of Wiana (n=3) and Lausake (n=2);
 - In addition, three green turtles were tagged and released in Ringdove bay (n=2) and Votlo Research Site (n=1) in Epi Island;
 - From Lelepa Island, five hawksbill turtles were tagged and released from Lelepa landing (n=3), Lelepa reef (n=1) and Lelepa village (n=1);
 - Also in addition from Akamb Island, five green turtles were reported from the villages of Marou (n=1) and Akamb (n=4) and one hawksbill turtle from Akamb village;
 - Twenty-five unidentified marine turtle species were reported from Tranquility Island Resort in Moso Island;
 - While five hawksbill turtles were reported from Lolowai village, Ambrym Island (n=1), Kakula Island (n=1) and Nikaura Village (n=3). Moreover three green turtles were reported from Hog harbour, Espiritu Santo (n=1) and Piliuru village, Pele Island (n=2).
- **2003 Nesting:** For nesting turtles, two hawksbill turtles were reported from Ringdove bay, Epi Island (n=1) and **Namuka Island (n=1)???** turtle 53cm in Malekula Island. While one green turtle was reported from Votlo Research site (n=1) in Epi Island. Along with three leatherback turtles reported from Port Qumie (n=1) and Votlo Research (n=1) in Epi Island and Port Vato (n=1).
- **2004 Foraging:** A total of 60 hawksbill and 50 green turtles, 71 unidentified marine turtle species and one olive ridley turtle were reported to be tagged and released in 2004:
 - Out of the total, 71 of them were head starting unidentified marine turtle species that were kept in captivity and were tagged and released from Tranquility Island Resort in Moso Island;
 - From Efate Island, 16 hawksbill turtles were reported from the villages of Emua (n=1), Mangaliliu (n=5), Saama (n=1), Siviri (n=7), Tanoliu (n=1) and Tasipuariki (n=1), while 18 green turtles were from Emua (n=1), Fatupau (n=1), Siviri (n=3) and Takara (n=13);
 - Moreover from Nguna Island, 17 hawksbill turtles were reported from Nguna-Pele Conservation Area (n=3), Taloa (n=11) and Unakap village (n=3). And as well as four green turtles on Nguna Pele conservation area, Unakap (n=1) and Matakove (n=1) were tagged and released;
 - From Malekula Island, five green turtles were from the villages of Leviamp (n=2) and Okai (n=3), while seven hawksbill turtles were from Faroun (n=1), Rembe (n=1) and Okai village (n=5);
 - From Maskelyne Island, ten green turtles were from the villages of Lutes (n=5), Pelongk (n=2) and Peskarus (n=3), as well as one hawksbill turtle also from Lutes (n=1) and one olive ridley turtle reported from Peskarus (n=1);
 - From Pentecost Island, three hawksbill turtles were from Loltong Harbour (n=1) and Namwarangiut village (n=2), three green and three hawksbill turtles were from the village of Marou (n=6) as well as one green turtle from Akamb village.

- In addition from Emae Island, three hawksbill turtles were from Finonge (n=1) and Tongamea (n=2) and one green turtle reported from Tenmaru village also in Emae Island.
- Furthermore, for Emau Island, three green turtles were reported from Lausake village (n=1) and Lausake passage (n=2), as well as three hawksbill turtles reported also from Lausake village (n=2) and Lausake passage (n=1);
- Five green turtles were reported from Behaveh, Sakau (n=1), Port Olry, Espiritu Santo (n=1), Laman Bay, Epi Island (n=1) and Avok Island (n=2). And seven hawksbill turtles were also reported from Lelepa village, Lelepa Island (n=2), Avok Island (n=3) and Laman bay, Epi Island (n=1).
- **2004 Nesting:** For nesting turtles, eight green were reported for 2004 period. Following bullet points are the detailed breakdown:
 - Eight nesting green turtles were reported from Epau village reef (n=1), Efate, Rembe, Malekula Island (n=4), Epi Island (n=1), Vakas Basis, Malekula Island (n=1) and Pelongk village, Maskelyne (n=1),
- **2005 Foraging:** A total of 28 green, 55 hawksbill and one olive ridley turtles and 57 unidentified marine turtle species were observed in 2005, these are foraging turtles that were captured, tagged and released in various Islands in Vanuatu. Following bullet points are the detailed breakdown:
 - Fifty-four of them were head starting unidentified marine turtle species that were tagged and released from captivity from Tranquility Island Resort, Moso;
 - From Malekula Island, 11 hawksbill turtles were reported from Bamboo bay (n=5), Faroun village (n=1), Vakas Basis (n=2) and Okai village (n=3). And in addition, two green turtles were reported from Okai village;
 - From Nguna Island, 12 hawksbill turtles were reported from Laken Napere (n=1), Nagisutare (n=2), Nguna-Pele Conservation Area (n=8), and Tarena (n=1) and also seven green turtles from Matakove (n=1), Nguna-Pele Conservation Area (n=2), Taikesa (n=1), Tarena (n=2) and Woralapa village (n=1);
 - In addition, three green turtles were from Emua (n=1), Epau (n=1) and Takara (n=1) and as well as seven hawksbill turtles were also reported from Emua (n=1), Mangaliliu (n=5) and Pango (n= 1) in Efate Island;
 - In addition from Emau Island, one green turtle was reported from Mangarongo village, and one unidentified marine turtle species from Kopesimaeto village. As well as five hawksbill turtles reported from Mginiae beach (n=2), Vatukura (n=2) and Wiana (n=1) in Emau Island, moreover one olive ridley turtle was also reported from Mgainae village;
 - In Sakau Island, three hawksbill turtles were tagged and released from the villages of Tahumben (n=1), Tasmania (n=1) and Tonomeal (n=1);
 - Four green turtles were from Ranon (n=3) and Varo village (n=1), while four hawksbill turtles were reported from Ranvetlam (n=1), Maltou village (n=2) and Varo village (n=1) in Ambrym Island.
 - In Akamb Island, four hawksbill turtles were reported from Marou (n=1), Robunas (n=1) and Rorbaeigk (n=2). As well as one green turtle and one unidentified marine turtle species reported from Marou village;
 - Furthermore, six green turtles were reported from Anelgohat, Aneityum Island (n=1), Worarana, Emae Island (n=1), Siviri village (2), Foraun Village (n=1) and Mystery Island (n= 1), while eight hawksbill turtles were reported from Vulai Island, Maskelyne (n=1), Telvet, Motalava (n=1), Litatra village, Tegua Island (n=1), Toka village, Tores Island (n=2), Sola, Vanualava (1), Rembe (n=1), Lungharigi (n=1) and Vaturana, Emau (2).
- **2005 Nesting:** A total of 29 green turtles, three hawksbill turtles, four unidentified marine turtle species and two leatherback turtles were reported to be nesting in Vanuatu in 2005:

- The twenty-nine green turtles were from Takara (n=3), Bamboo Bay, Malekula Island (n=11), Malekula Island (n=8), Toka village (n=1), Vakas basis, Malekula Island (n=1), Votlo Research, Epi Island (n=3), Pinapow beach, Malekula Island (n=1) and Nelson Bay, Epi Island (n=2). And three hawksbill turtles from Malekula island: Vakas Basis (n=1), Bamboo Bay (n=1) and Malekula (n=1);
 - In addition, three nesting leatherback at Votlo Research Site (n=2) in Epi Island and three unidentified marine turtles from Malekula Island.
- **2006 Foraging:** A total of 90 green, 73 hawksbill and four loggerhead turtles, and four unidentified marine turtle species are foraging turtles that were reported to be captured, tagged and released in 2006. The following bullet points are the detailed breakdown:
 - Nineteen green turtles were from the villages of Piliura (n=14), Werauru (n=1) and Worasiviu (n=3), while 10 hawksbill turtles were reported from Lanuamoa (n=2), Piliura (n=4) and Worasiviu (n=5) in Pele Island;
 - From Nguna Island, six green turtles were from Malapau passage (n=3), Matakove (n=1), Taloa (n= 4) and Vatvako (n=1) and six hawksbill turtles from Matakove (n=2), Taloa village (n=3) and Unakap village (n=1) in Nguna Island;
 - Ten hawksbill turtles were head starting turtles from Tranquility resort in Moso Island, they were tagged and released as well as three unspecified marine turtle species were also reported from there;
 - In addition, five hawksbill turtles were from Pelongk (n=1), Sakao (n=1) and Vulai (n=3) in Maskelyne Island;
 - From Malekula Island, nine hawksbill turtles were from Bamboo bay (n=5), Lawa Southwest Bay (n= 3) and Okai (n=1) and a green turtle, also from Okai village in Malekula Island;
 - From Loh Island, three loggerhead turtles were reported from Lungharigi, while two hawksbill turtles were reported from Nguleley Lenga Point (n=2);
 - Five green turtles were reported from the villages of Marou (n=1), Robunas (n=1), Rorbaeigk (n=1), Varo village (n=2) and five hawksbill turtles reported from Marou village (n=2) and Rorbaeigk (n=3) and in Akamb Island;
 - From Ambrym Island, two hawksbill turtles were reported from a site in Ambrym and one loggerhead turtle at Lonibili in Ambrym Island;
 - From Emau Island, three green turtles were reported from Lausake passage (n=2) and Wiana passage (n=1), Two hawksbill turtles were reported from Nikaura (1) and Nuvi (1) in Epi Island.
 - Thirty-eight green turtles were reported from Mystery Island (37) and Tonomeal (1) in Sakau Island. Also seven hawksbill turtles from Mystery Island (6), and Vatmbeaf village, Sakau Island (1), in addition one unspecified marine turtle species was also reported from Tranquility resort.
 - Eighteen green turtles were reported from Anelgohat village, Aneityum (11), Aniwa Island (1), Bamboo bay (1), Levor (1), Nebure (1), Weisir (1) Port Olry, Espiritu Santo (1) and unknown site, Vanuatu (1). And 15 hawksbill turtles from Mangaliliu, Efate Island (2), Bennewur (1), Lausake village (1), Nonou village (1), Telvet village, Motalava (3), Tonomeal village (1), Wiana village (5) and Worana (1).
- **2006 Nesting:** A total of 31 green , 48 hawksbill and one leatherback turtles were reported to be nesting in 2006. The following bullet points are the detailed encounters:
 - Thirty-one green turtles were reported to be nesting in Bamboo bay, Malekula Island (29), Vaipei village, Espiritu Santo (2) and Malekula (1)
 - Forty-eight hawksbill turtles were reported to be nesting in Lungharigi, Loh Island (1), Tasiriki, Moso Island (9), Bamboo Bay, Malekula Island (33), Vaipei, Espitito Santo (4)
 - And a Leatherback turtle was reported to be nesting in Port Olry, Espitito Santo (1).

- **2007 Foraging:** A total of 87 green and 70 hawksbill turtles and seven unidentified marine turtle species were reported to be captured, tagged and released in 2007 for foraging turtles. The following bullet points are the detailed encounters:
 - From Moso Island, a total of twenty two hawksbill turtles (22) and unidentified marine turtle species (1) were from Tranquility Island Resort and one green turtle and two hawksbill turtles were from reported from Tasiriki.
 - From Efate Island, three green turtles were encountered in Emua (1) and Takara (2). While six hawksbill turtles were reported from Black Sands (1), Emua (3), Tanoliu (1) and Tasipuariki (1). Moreover two unidentified marine turtle species (2) were from Efate (1) and Laukenasua (1).
 - 53 green turtles, six hawksbill turtles and two unspecified marine species turtles (2) were captured, tagged and released from Mystery Island.
 - In addition a green turtle was also reported from Vulai Island also in Maskelyne.
 - While two hawksbill turtles were reported from Bamboo bay (1) and Lawa Southwest Bay (1) in Malekula Island.
 - From Pele Island, two hawksbill turtles and one green turtle were reported from Piliura and two hawksbill turtles and four green turtle reported from Worasiviu.
 - Also from Sakau Island, one unidentified marine turtle species from Donomial and four hawksbill turtles from Tonomeal (1) Batavusai (1) and Behaveh (1), were reported.
 - Moreover one green turtle from Loltong Harbour and an unidentified marine turtle species from Melisisi village in Pentecost Island were reported.
 - In Gaua Island, one hawksbill turtle was reported from Matanda and for Gaua, two green turtles and one hawksbill were reported.
 - While from Emau Island, two hawksbill and one green turtle were reported from Lausake and one green turtle from Mangarongo.
 - Furthermore, 23 green turtles were reported from Unakap village, Nguna Island (1), Port Olry , Espirito Santo (1), Aniwa Lagoon, Aniwa Island (5), Lateu , Tegua Island (1), Unknown Site, Vanuatu (1), Epau village (1), Varo village, Akamb Island (1), Piliura village (1), Marou village, Akamb Island (1), Magam, Ambrym Island (1), Litatra , Tegua Island (1), Nuvi village, Epi Island (1), Anelcouhat (3), Lembu bay (1), Aneityum Island (1). In addition 24 hawksbill turtles from Unakap, Nguna Island (3), Hog Harbour (1), Aniwa Lagoon (1), Namsafura (1), Telvet village, Motalava Island (1), Marou village, Akamb Island (3), Port Vato, Ambrym (1), Volombau (1), Lombulomb (1), Sohdideuo (1), Vulai Island (3), Avunatari, Malo Island (3) and Wasaga Village (1)

- **2007 Nesting:** A total of 21 green and 53 hawksbill turtles and one loggerhead turtle were reported to be nesting during 2007 period. The following bullet points are the detailed encounters:
 - On Malekula Island, a total of 12 green and 19 hawksbill turtles beached for nesting on Bamboo bay and also a green turtle nested on Vakas Basis;
 - In addition, 30 hawksbill turtles and two green turtles nested on Tasiriki beach, Moso Island;
 - Furthermore, Seven green turtles nested in Votlo village, Epi (n=1), Vasvasada, Pentecost (n=2), Molboe (1), Wanbe (1), Magan (1), Vakas Basis (1) and Wiawi village (1).
 - Moreover, four hawksbill turtles nested in Wiawi village, Malekula (n=3) and Lalindi beach (n=1),
 - And one loggerhead nested at Linua.

- **2008 Foraging:** A total of 15 green and 19 hawksbill turtles were captured, tagged and released in 2008. The following bullet points are the detailed breakdown:
 - A total of 11 green and one hawksbill turtles were captured, tagged and released on Mystery Island;
 - Another seven hawksbill and one green turtles tagged in Bamboo bay (7) and Wiawi (1) on Malekula Island;

- Furthermore three hawksbill turtles were captured, tagged and released from Port Vato, Ambrym;
 - Moreover, three hawksbill turtles were captured, tagged and released from Hog Harbour and Radio Station in Espiritu Santo;
 - Also, five hawksbill turtles were captured, tagged and released from Marou village, Akamb (n=2), Saninakani, Aniwa (n=1) and Avunatari village, Malo (n=2);
 - In addition, three green turtles were captured, tagged and released from Waluriki, Ambae (n=1), Cooks Bay, Erromango (n=1) and Lateu village, Tegua (n=1).
- **2008 Nesting:** A total of 24 green, 83 hawksbill and one olive ridley turtles and two unidentified marine turtle species were reported to be nesting turtles observed during 2007 period. The following bullet points are the detailed encounters:
 - Out of the total of 24 green turtles, 14 green turtles were from Bamboo bay and the others were from Wiawi (3), Port Vato (2), Vakas Basis (2), Namuka Island (1), Dixon Reef village (1), Tasiriki (1);
 - In addition for hawksbill turtles, out of the total of 83, 57 were from Tasiriki and others were from Wiawi (7) and Bamboo Bay (17);
 - Furthermore one olive ridley turtle beached to nest at Wiawi and two unidentified marine turtle species nested in Ambeck, Vanualava (2).
- **2009 Foraging:** A total of one green and three hawksbill turtles were reported to be captured, tagged and released in 2009 period. The following bullet points are the detailed encounters:
 - One hawksbill turtle was tagged and released from Aniwa lagoon;
 - While two hawksbill turtles were tagged and released from Tranquility Island Resort;
 - In addition, one green turtle was tagged and released at Tasiriki village.
- **2009 Nesting:** A total of nine green, 68 hawksbill, three unspecified marine turtle species and one olive ridley turtles were reported to be nesting turtles observed during 2009 period. The following bullet points are the detailed encounters:
 - Out of the total, 44 hawksbill, three unspecified marine turtles and five green turtles beached on Tasiriki for nesting;
 - In addition, 24 hawksbill turtles and five green turtles nested on Bamboo Bay beach;
 - Furthermore, three green and one olive ridley turtles nested on Wiawi village.
- **2010 Foraging:** A total of 16 green and 73 hawksbill turtles were reported to be tagged and released in 2010 period. The following bullet points are the detailed encounters:
 - Out of the total, 72 head starting hawksbill turtles were tagged and released from Tranquility Island Resort;
 - Moreover 14 green and one hawksbill turtles were tagged and released from Mystery Island;
 - While two green turtles were tagged and released from Anuwunamlau.
- **2010 Nesting:** A total of six green and 18 hawksbill turtles, and one unidentified marine turtle species were reported to be nesting turtles observed during 2010 period. The following bullet points are the detailed encounters:
 - Out of the total, three green and 14 hawksbill turtles beached for nesting on Tasiriki village;
 - In addition, three green and four hawksbill turtles; and one unidentified marine turtle nested on Bamboo Bay.
- **2011 Foraging:** A total of four green and 120 hawksbill turtles were reported to be tagged and released in 2011 period. The following bullet points are the detailed encounters:
 - Out of the total, one green turtle was captured by netting and was tagged and released from Mengyeng in Rah Island;

- In addition, 112 head started turtles were tagged and released from Tranquility Island Resort;
 - Moreover, seven hawksbill and three green turtles were captured, tagged and released from Namwarangiut village (n=1), Nerenigman village (n=1), Port Narvin (n=2), Taloa village (n=1), Tanoliu village (n= 2) and Unakap village (n=3);
 - Furthermore one green turtle was recaptured in Vao, this was a tag recovery turtle, which was tagged and released in Mystery Island in 2010.
- **2011 Nesting:** A total of three leatherback and one green turtles were reported to be nesting on Votlo Research site during 2011 period.
- **2012 Foraging:** A total of 100 head starting hawksbill turtles were tagged and released at Tranquility Island Resort. And also
 - Six green turtles were tagged and released in Emua village (2), Letokas village (1), Mapuna Beach, Moriu village (1), Peskasrus village (1) and Unakap village (1);
 - Seven hawksbill turtles were tagged and released from Letokas (1), Malekula (1), Mapuna Beach, moriu village (3), Port Narvin (1), Taloa village (1)
- **2012 Nesting:** A total of 22 green , 21 hawksbill and one leatherback turtles were reported to be nesting in 2012: See bullet points below for details:
 - 18 hawksbill and five green turtles nested in Bamboo Bay;
 - One hawksbill and three green turtle nested in Letokas village;
 - Two green turtles nested in Malekula Island;
 - Two green and two hawksbill turtles nested in Tumaris;
 - One green and one leatherback turtles nested in Votlo;
 - 11 green and one hawksbill turtles nested in Wiawi.
- **2013 Foraging:** A total of 112 Hawksbill and seven green turtles were reported to be tagged and released in 2013: See bullet points below for details:
 - One Hawksbill and two green turtles from Anelcouhat;
 - One hawksbill from Lamap village;
 - Three green turtles from Malekula Island;
 - 110 head starting hawksbill turtles from Tranquility Resort
 - Two green turtles from Wiawi village.
- **2013 Nesting:** A total of two Hawksbill turtles, eight green turtles and one leatherback turtle were reported to be nesting in 2013: See bullet points below for details:
 - Two green turtles and one hawksbill turtle from Bamboo bay;
 - Three green turtle, one hawksbill and one leatherback turtle from Votlo;
 - Three green turtles from Wiawi village (2) and Anelcouhat (1) .
- **2014 Foraging:** A total of 91 head starting hawksbill were reported to be tagged and released in 2014.
- **2014 Nesting:** A total of five hawksbill turtles and two green turtles were reported to be nesting in 2014: See bullet point below for details:
 - Two green turtles and five hawksbill turtles from Bamboo Bay.
- **2015 Foraging:** A total of two hawksbill turtles and four green turtles were reported to be tagged and released from Embasi, Moso Islands as part of tag and release as a tourism activity.

4. NESTING TURTLES BY SITE

4.1 Leatherback Turtle

TREDS records show leatherback turtle nesting on Epi, Efate, Espiritu Santo and Malekula with Votlo, Epi showing the most numbers (Table 3) (Trevor, 2009).

Table 3: Nesting leatherback turtles recorded in TREDS for Vanuatu during 2002-2007 period

Location	Island	2002/03	2003/04	2004/05	2006/07	2011	2012	2013
Port Olry	Espiritu Santo				1

Port Vato	Epi	1						
Votlo	Epi	4					1	1
Votlo Research site	Epi			2		3		
	Total by year	6	1	2	1	3	1	1

4.2 Loggerhead Turtle

There is only one record in TREDS of nesting loggerhead turtle which was on the island of Loh (Table 4) (Trevor, 2009). There no updates for nesting loggerheads.

Table 4: Nesting loggerhead turtles recorded in TREDS for Vanuatu during 2006-2007

Location	Island	2006/2007
Linua	Loh	1
	Total by year	1

4.3 Hawksbill Turtle

The hawksbill turtle nesting recorded in TREDS are on the islands of Ambrym, Efate, Epi, Espiritu Santo, Malekula, Moso and Tekoa. The highest numbers, possibly due to effort put into surveys, are at Tasiriki (Moso) and Bamboo Bay (Malekula) during the 2006-2007, 2007-2008, 2009 - 2010 and 2011-2012 nesting seasons (Table 5). The update includes the data collected in 2012-2015,

Table 5: Nesting hawksbill turtles for 1995-2015 period in TREDS for Vanuatu.

Location	Island	1995 /96	1996 /97	2000 /01	2003 /04	2004 /05	2005/ 06	2006 /07	2007 /08	2008/ 09	2009 /10	2011/ 12	2013 /14

	Total by year	1	1	2	3	2	2	53	58	76	86	26	12

4.4 Green Turtle

Green turtles nesting have been recorded in TREDS on the islands of Epi, Espiritu Santo, Malekula, Moso, Motalava, Nguna, Pentecost, Pele and Tekoa, with the highest numbers recorded on Malekula Island due to surveys carried out at the Bamboo Bay area in 2004-2010 and 2006-2010 nesting seasons. The update includes the data for data for 2012-2014.

Table 6: Nesting green turtles recorded in TREDIS for Vanuatu during 1992-2014 period.

Location	Island	1992/93	1999/00	2000/01	2001/02	2002/03	2003/04	2004/05	2005/06	2006/07	2007/08	2008/09	2009/10	2011/12	2013/14

5. SIZE FREQUENCY BY SPECIES

5.1 Size Frequency for Green Turtles

A total of 638 green turtles have curved carapace length (CCL) measurement records in TREDIS for Vanuatu. The size frequency graph shows 394 juveniles within the class size range of 5.0-64.9cm, 63 sub-adults within the class size range of 65.0-84.9cm and 181 adults in the class size range of 85.0-154.9cm (Figure 1). Siota (2010) reported 542 green turtles with CCL measurements and Siota (2011-2012) reported a total of 547 green turtles with CCL measurements for 2011 to 2012 report.

CCL Size frequency for Green Turtles in Vanuatu

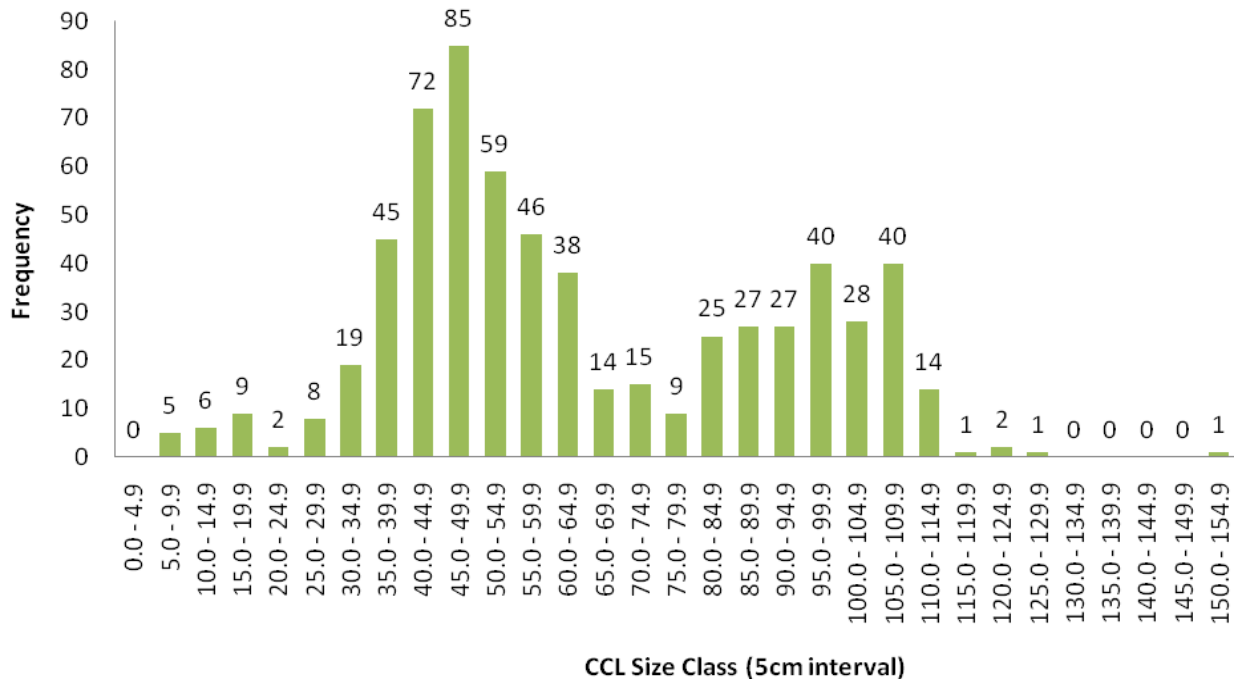

Figure 1: Size frequency for green turtles as recorded in TREDs for Vanuatu

5.2 Size Frequency for Hawksbill Turtles

A total of 1,254 hawksbill turtles have CCL measurement records in TREDs for Vanuatu. The size frequency graph shows 887 juveniles within the CCL size class range of 0.0-64.9cm, 23 sub-adults within the CCL size class range of 65.0-79.9cm and 344 adults within CCL size class range of 80.0-109.9cm (Figure 2). Siota (2010) reported 870 hawksbill turtles with CCL measurements and Siota (2011-2012) reported 1070 hawksbills with CCL measurements in 2011- 2012.

CCL size frequency of hawksbill turtles in Vanuatu

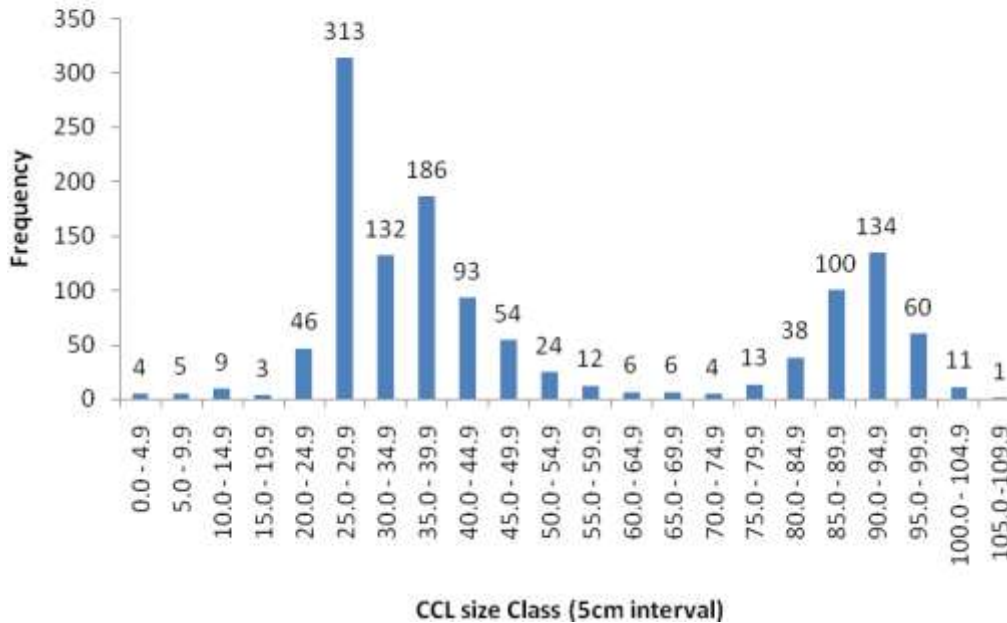

Figure 2: Size frequency for hawksbill turtles as recorded in TREDS for Vanuatu.

5.3 Size Frequency for Leatherback Turtles.

There are only 16 leatherback turtles with CCL measurements recorded in TREDS for Vanuatu. The CCL size class range for the nine leatherback turtles are from 70.0-199.9 cm.

5.4 Size Frequency for Loggerhead Turtles.

Only five loggerhead turtles have CCL measurements in TREDS for Vanuatu. The CCL size class range for these loggerhead turtles are from 40.0-59.9cm for juveniles (n=4) and 100.0-104.9cm for one adult.

5.5 Size Frequency for Olive Ridley Turtles.

Only three (3) olive ridley turtles have CCL measurements recorded in TREDS for Vanuatu. The CCL size class range for these olive ridley turtles is from 45.0-59.9cm.

6. TAG RECOVERY

6.1. Turtles tagged and recovered within Vanuatu

Out of 63 turtles that were tagged and recovered within Vanuatu. Thirteen were from Bamboo Bay village on Malekula Island, three nesting green turtles were remigrant nesters with 3-7 years of remigration intervals and the rest were recaptured within nesting seasons. In Tasiriki village, Moso Island, only one hawksbill turtle was recaptured as a remigrant interval nester and the other 33 were recovered within nesting seasons. Wiawia village had two nesting turtles recaptured within a season, one green and the other an olive ridley turtle (ANNEX 2). In addition, 14 tagged turtles were reported as tag recoveries by Trevor (2009). Out of these, five records have no initial tagging details and could only be traced as being used in Vanuatu through TREDS tag inventory. The updates include 49 turtles that were tagged and recovered within Vanuatu. Trevor (2009) reported only 14 tag recoveries.

6.2 Turtles tagged outside and recovered within Vanuatu

Three green turtles tag recoveries were from turtles that were reported as nesting and tagged in

South Great Barrier Reef - Australia, French Polynesia and American Samoa. Two additional green turtles were tagged in Australia and French Polynesia, of which the initial tagging record for Australia was unknown, while the green turtle in French Polynesia was released from captivity from Scilly Atoll. The two hawksbill turtle tag recoveries were of turtles that were tagged and released as sub-adults in Australia and Samoa and recovered in Vanuatu (Trevor, 2009) (Table 8). There are no new updates for turtles tagged outside and recovered in Vanuatu for this reporting period.

6.3 Turtle tagged in Vanuatu and recaptured outside

A hawksbill turtle tagged in Vanuatu on Malekula Island in Bamboo Bay village was recovered stranded in Australia at Lake Arrangan beach (Table 9). This tag recovery is a new update of tag recovery for Vanuatu.

Table 8: Tag recovery of turtles tagged outside and recaptured in Vanuatu

Tag No.	Species	Sex	Initial Encounter			Other Encounter		
			Date	Location	Activity	Date	Location	Fate
K21864	Green	Female	09/Dec/2000	Lady Elliot Island,SGBR, QLD, Australia	Nesting	02/Feb/2002	Lutes Village, Malekula Island	Killed

39	Green	Female	30/Apr/1972	Scilly Atoll, French Polynesia	In Captivity	14/Sep/1973	Maskelyne Island, Vanuatu	unknown

Table 9: Turtle tagged in Vanuatu and recovered outside

Tag No.	Species	Sex	Initial Encounter			Other Encounter		
			Date	Location	Activity	Date	Location	Activity
R41825/R41825	Hawksbill	Female	09/Dec/2009	Bamboo bay village	Nesting	20/Oct/2010	Lake Arrangan Beach, Brooms head NSW,Australia	Stranded, Dead

7. RECOMMENDATION

- More training is needed for the turtle monitors in proper protocols for filling in of turtle datasheets.
- Update tag inventory records to make sure that tag distribution to turtle monitors, loss or damaged tags are reported back to SPREP on their usage for easier verification of data.
- Regular flow of information between Wan Smolbag Theatre's (WSB) Vanua-Tai Turtle Monitors Network and partners with SPREP should be encouraged. This will facilitate informative and useful reporting of tag recoveries back to the government and its partners.
- Vanua- Tai Turtle Monitors Network has grown rapidly, so turtle data needs to be entered in the turtle database regularly to avoid back log of data and datasheets loss.
