

## FIJI – Country Data Dossier for Reducing Risk of Extinction Summary Sheet

**Summary Table of Threatened Species Identified by the IUCN Red List**

Mammals	Birds	Reptiles*	Amphibians	Fishes*	Molluscs*	Other Inverts*	Plants*
6	14	14	1	13	68	97	65

### Amphibian, Mammal, Plant\*, and Reptile\* Threatened Species Identified by the IUCN Red List

In Fiji:

- Out of 2 amphibian species, 1 are threatened or extinct
- Out of 27 mammal species, 6 are threatened or extinct
- Out of 174 plant species, 65 are threatened or extinct
- Out of 27 reptile species, 15 are threatened or extinct

### List of Threatened Species Identified by the IUCN Red List

Fiji has:

- 1 Critically Endangered (CR) mammal species: *Mirimiri acrodonta*
- 21 Critically Endangered (CR) plant\* species: *Acacia mathuataensis*, *Acmopyle sahniana*, *Aglaiia evansensis*, *Aglaiia gracilis*, *Aglaiia unifolia*, *Astronidium floribundum*, *Astronidium inflatum*, *Astronidium kasiense*, *Astronidium lepidotum*, *Astronidium pallidiflorum*, *Astronidium saulae*, *Balaka macrocarpa*, *Cynometra falcate*, *Cyphosperma tanga*, *Gardenia anapetes*, *Gardenia candida*, *Gardenia vitiensis*, *Geniostoma clavigerum*, *Parkia parrii*, *Syzygium phaeophyllum*, *Weinmannia exigua*
- 3 Critically Endangered (CR) reptile\* species: *Brachylophus vitiensis*, *Eretmochelys imbricata*, *Leiopisma alazon*

### List of Bird Threatened Species

- Fiji has 2 Critically Endangered (CR) bird species: *Charmosyna amabilis*, *Pseudobulweria macgillivrayi*

### List of Critically Endangered Endemic Species

- Out of 1 Critically Endangered (CR) mammal species, Fiji has 1 endemic mammal species: *Mirimiri acrodonta*
- Out of 3 Critically Endangered (CR) reptile species, Fiji has 2 endemic reptile species: *Brachylophus vitiensis*, *Leiopisma alazon*
- Out of 21 Critically Endangered (CR) plant species, Fiji has 21 endemic plant species: *Acacia mathuataensis*, *Acmopyle sahniana*, *Aglaiia evansensis*, *Aglaiia gracilis*, *Aglaiia unifolia*, *Astronidium floribundum*, *Astronidium inflatum*, *Astronidium kasiense*, *Astronidium lepidotum*, *Astronidium pallidiflorum*, *Astronidium saulae*, *Balaka macrocarpa*, *Cynometra falcate*, *Cyphosperma tanga*, *Gardenia anapetes*, *Gardenia candida*, *Gardenia vitiensis*, *Geniostoma clavigerum*, *Parkia parrii*, *Syzygium phaeophyllum*, *Weinmannia exigua*
- Out of 2 Critically Endangered (CR) bird species, Fiji has 2 endemic bird species: *Charmosyna amabilis*, *Pseudobulweria macgillivrayi*

\*Reptiles, fishes, molluscs, other invertebrates and plants: please note that for these groups, there are still many species that have not yet been assessed by the IUCN Red List and therefore, their status is not known. The figures presented for these groups should be interpreted as the number of species known to be threatened within those species that have been assessed to date, and not as the overall total number of threatened species for each group.

**FIJI – Summary Table of Threatened Species Identified by the IUCN Red List, Amphibian, Mammal, Plant, and Reptile Threatened Species Identified by the IUCN Red List, List of Threatened Species Identified by the IUCN Red List, Bird Threatened Species, List of Threatened Bird Species, Species Protection Statistics (All PAs), and Critically Endangered Endemic Species**

## Birds

Species ID	Species	Common Name
1381	<i>Charmosyna amabilis</i>	Red-throated Lorikeet
3881	<i>Pseudobulweria macgillivrayi</i>	Fiji Petrel

## Species Protection Statistics (All PAs) \*<sup>15</sup>

Class	No. species	% protected	No. Globally Threatened (GT)	% GT protected	No. Endemic (E)	% E protected	No. Threatened Endemic (TE)	% TE protected
Aves	127	83.46	23	78.26	27	88.89	8	75.00
Mammalia	35	88.57	8	87.50	1	100.00	1	100.00
Amphibia	2	100.00	1	100.00	2	100.00	1	100.00

\* A species is counted as “protected” if its mapped range (from IUCN Red List) overlaps to some extent (>0% to 100%) with PA boundaries in the country. This does not mean that this protection is adequate.

**NOTES**

<sup>i</sup> Threatened Species are species that are designated as Critically Endangered, Endangered or Vulnerable by the IUCN Red List. These criteria are explained here: <http://www.iucnredlist.org/technical-documents/categories-and-criteria>, and the criterion Critically Endangered is explained in details below.

<sup>ii</sup> IUCN Red List definition of Critically Endangered (CR)

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the criteria A to E, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

A. Reduction in population size based on any of the following:

1. An observed, estimated, inferred or suspected population size reduction of  $\geq 90\%$  over the last 10 years or three generations, whichever is the longer, where the causes of the reduction are clearly reversible AND understood AND ceased, based on (and specifying) any of the following:

- (a) direct observation
- (b) an index of abundance appropriate to the taxon
- (c) a decline in area of occupancy, extent of occurrence and/or quality of habitat
- (d) actual or potential levels of exploitation
- (e) the effects of introduced taxa, hybridization, pathogens, pollutants, competitors or parasites.

2. An observed, estimated, inferred or suspected population size reduction of  $\geq 80\%$  over the last 10 years or three generations, whichever is the longer, where the reduction or its causes may not have ceased OR may not be understood OR may not be reversible, based on (and specifying) any of (a) to (e) under A1.

3. A population size reduction of  $\geq 80\%$ , projected or suspected to be met within the next 10 years or three generations, whichever is the longer (up to a maximum of 100 years), based on (and specifying) any of (b) to (e) under A1.

4. An observed, estimated, inferred, projected or suspected population size reduction of  $\geq 80\%$  over any 10 year or three generation period, whichever is longer (up to a maximum of 100 years in the future), where the time period must include both the past and the future, and where the reduction or its causes may not have ceased OR may not be understood OR may not be reversible, based on (and specifying) any of (a) to (e) under A1.

B. Geographic range in the form of either B1 (extent of occurrence) OR B2 (area of occupancy) OR both: 17

1. Extent of occurrence estimated to be less than 100 km<sup>2</sup>, and estimates indicating at least two of a-c:

- a. Severely fragmented or known to exist at only a single location.
- b. Continuing decline, observed, inferred or projected, in any of the following:
  - (i) extent of occurrence
  - (ii) area of occupancy
  - (iii) area, extent and/or quality of habitat
  - (iv) number of locations or subpopulations
  - (v) number of mature individuals.

c. Extreme fluctuations in any of the following:

- (i) extent of occurrence
- (ii) area of occupancy

(iii) number of locations or subpopulations

(iv) number of mature individuals.

2. Area of occupancy estimated to be less than 10 km<sup>2</sup>, and estimate indicating at least two of a-c:

a. Severely fragmented or known to exist at only a single location.

b. Continuing decline, observed, inferred or projected, in any of the following:

(i) extent of occurrence

(ii) area of occupancy

(iii) area, extent and/or quality of habitat

(iv) number of locations or subpopulations

(v) number of mature individuals.

c. Extreme fluctuations in any of the following:

(i) extent of occurrence

(ii) area of occupancy

(iii) number of locations or subpopulations

(iv) number of mature individuals.

C. Population size estimated to number fewer than 250 mature individuals and either:

1. An estimated continuing decline of at least 25% within three years or one generation, whichever is longer, (up to a maximum of 100 years in the future) OR

2. A continuing decline, observed, projected, or inferred, in numbers of mature individuals AND at least one of the following (a-b): 18

a. Population structure in the form of one of the following: (i) no subpopulation estimated to contain more than 50 mature individuals, OR (ii) at least 90% of mature individuals in one subpopulation.

b. Extreme fluctuations in number of mature individuals.

D. Population size estimated to number fewer than 50 mature individuals.

E. Quantitative analysis showing the probability of extinction in the wild is at least 50% within 10 years or three generations, whichever is the longer (up to a maximum of 100 years).
